EDUCATION

University of California, Berkeley

M.A. in Statistics & Data Science

Berkeley, CA, USA

May 2027

The University of Texas at Austin

B.S. in Behavioral and Social Data Science

Austin, TX, USA

Dec. 2025

GPA: 4.0/4.0 | **Certificate:** Applied Statistical Modeling | **Minor:** Business

Honors and Awards: Imura Peace Endowed Scholarship, Phi Kappa Phi Honor Society, Distinguished College Scholar

Relevant Coursework: Probability, Mathematical Statistics, Regression Analysis, Data Structures & Algorithms

WORK EXPERIENCE

Numi | Dubai, UAE | *Junior Data Analyst*

May 2025 – Aug. 2025

- Conducted **market research** by analyzing literature and industry reports on women's financial literacy, fintech adoption, and behavioral patterns across global and MENA regions; findings strengthened investor pitches and clarified NUMI's mission and impact
- Developed **user segmentation models** (four personas) from market research insights, enabling leadership to visualize target audiences and guiding early discussions on product direction and marketing strategies
- Built 12–36-month **financial growth projections** and **fundraising scenario models** (\$1.5M, \$10M, \$20M) in Google Sheets, supporting strategic planning and providing analyses, which were incorporated into fundraising conversations with investors
- Performed **sentiment analysis** in **R** on public reactions to major crypto events, complementing financial trend analysis and outlining a framework for an AI coach to combine sentiment with financial data in generating user insights

Colliga Apps | Austin, TX | *Executive Operations Assistant*

May 2025 – Jul. 2025

- Directed **cross-functional operations** by managing communications across leadership, developers, and external partners; streamlined feedback exchange across teams, saving time and improving project efficiency
- Developed an **Excel tracker** for 10+ scientific collaborators and **customized ClickUp dashboards** for legal, finance, and product teams, improving reporting accuracy and giving leadership a consolidated view of progress with timely updates
- Hosted 5+ Colliga app demos and organized 50+ hours of AI notetaker transcripts into actionable records, securing partner interest in adoption and facilitating timely follow-up on product and research initiatives

TIES Lab | Austin, TX | *Data Science Intern*

Jun. 2024 – Aug. 2024

- Applied **multilevel regression models** and **text analysis** in **R** to conduct an independent research project on mood, behavior, and conflict intensity; significant findings revealed that negative moods increased conflict intensity, while the use of “we-words” unexpectedly amplified rather than buffered conflict
- Leveraged R to wrangle data and compute descriptive statistics for 33 moods/behaviors across 12,600 rows, identifying coding inconsistencies and improving data reliability by enabling the team to cross-check and correct human errors
- Coordinated with graduate students and the principal investigator to input and manage 1,500+ prompts on the participant-facing app, capturing errors that affected user experience and data integrity, leading to a smooth launch that ensured reliable app use and high-quality participant data

Dept. of Statistics and Data Sciences | Austin, TX | *Undergraduate Teaching Assistant*

Jan. 2023 – Dec. 2024

- Mentored students in **Excel** and the **Data Analysis Toolpak** to perform descriptive and inferential statistics, demonstrating **Pivot Tables** and visualizations on datasets with 200+ rows and troubleshooting analysis issues, which improved accuracy and confidence in applied data analysis
- Led interactive Q&A sessions and exam reviews for 500+ students, providing tailored practice and live support in lectures and breakout rooms that clarified complex statistical concepts and strengthened student performance
- Collaborated with faculty and TAs to grade homework for 40+ students per semester, ensuring the accuracy of Excel-based analyses and delivering detailed feedback that advanced student mastery of statistical methods

ACADEMIC EXPERIENCE

Psychomotor Tracing Analysis of 3D Hand-Tracking Data

Aug. 2025 – Present

- Collected 3D hand-tracking data from a Leap Motion Controller (a 3D motion-tracking device) to examine how

movement dynamics during tracing tasks reflect attention and cognitive processes

- Developed Python scripts to record, clean, and visualize millisecond-level motion trajectories; extracted features such as position, velocity, and acceleration; applied smoothing and filtering techniques to reduce noise and identify movement patterns
- Explored the digital adaptation of traditional psychomotor tasks (e.g., Nine-Hole Peg Test) and evaluated the measurement accuracy and reliability of the Leap Motion device to inform its potential application in future behavioral research

Reddit Mental Health Sentiment & Network Analysis

Mar. 2025 – Apr. 2025

- Analyzed 757 Reddit posts in **R** using sentiment and network analysis, finding that positive conversations formed hub-and-spoke clusters while negative ones spread in chain-like structures, highlighting that supportive exchanges center around community hubs while conflicts escalate in linear debates
- Applied balance theory and triad analysis to examine emotional shifts; results showed that unbalanced triads often moved toward positivity, suggesting that users engage in emotional repair, where empathy helps diffuse tension in mental health discussions
- Tested the link between engagement and sentiment, finding no strong correlation, which indicates that positivity in these communities is not driven by quantity of interaction, but perhaps by context, content, or user motivation

Analyzing Contributing Factors to Motor Vehicle Crashes

Jan. 2025 – Feb. 2025

- Analyzed ~2 million NYC collision records in **Python** using time-series and severity analysis, identifying driver inattention, failure to yield, and following too closely as leading factors, thus underscoring that human error drives the majority of crashes
- Identified temporal patterns showing distracted driving peaked during afternoon rush hours and on Fridays, and failure to yield caused 41% of injury-related crashes, highlighting where policy and enforcement can most effectively reduce harm
- Proposed targeted interventions, including traffic patrols during high-risk periods and collision-avoidance technologies, offering data-driven strategies to reduce injuries

Machine Learning Analysis of Diabetes Risk Factors

Mar. 2024 – Apr. 2024

- Performed exploratory data analysis in **Python** (pandas, seaborn, numpy), generating correlation matrices and pair plots that identified glucose, insulin, and age as the strongest predictors for feature selection
- Developed and tested Support Vector Machine (SVM) models in **scikit-learn**, achieving up to 85% accuracy in predicting diabetes and confirming the high predictive power of key risk factors
- Validated model findings against CDC-recognized health data, reinforcing the analysis's reliability, and generating actionable insights to inform early diabetes detection strategies

SKILLS

- **Programming Languages:** Python, R, SQL
- **Technical skills:** pandas, NumPy, matplotlib, seaborn, ggplot2, tidyverse
- **Platforms and Tools:** GitHub, Jupyter Notebook, Google Workspace, Microsoft Office
- **Languages:** Mandarin Chinese (native), English (native)

EXTRACURRICULAR EXPERIENCE

Psi Chi Honor Society – UT Austin Chapter | Austin, TX | *President*

May 2025 – Dec. 2025

- Guided Chapter strategy and operations by enhancing officer coordination, organizing academic and professional workshops, and maintaining active member communication, resulting in a 30% increase in engagement
- Oversaw the induction of 80+ new members, directing a six-member officer team and coordinating logistics, communications, and event planning to deliver a well-executed ceremony that elevated organizational reputation
- Established a peer-mentoring program and facilitated the Honors Research Poster Presentation each semester, creating structured opportunities for student development and research visibility
